Security Screens

- Beat More Burglars -

Increase the security of your home and business with the best security screens on the market

Crimsafe

Crimsafe is a stainless steel security mesh and frame system. It is used to secure doors, windows and outdoor areas from intruders and insects alike.

From a distance, it looks like flyscreen, allowing fresh air and sunlight in to your home. But Crimsafe is unlike any other flyscreen you've ever seen, because it makes your home virtually impenetrable to thieves.

This system is internationally patented and unique. Only Crimsafe features screws driven through both the clamp and the mesh and right into the frame on the other side, to provide incredible strength. Research shows that the most common method of entry through security screens is a well-placed series of kicks that bust the screen apart. That won't work with Crimsafe. You can kick at Crimsafe's Tensile-Tuff® Security mesh repeatedly, and you will definitely injure yourself before you break through it. We really mean it.

Burglars don't have a long time to spend trying to get into your home. They must get in, quickly, quietly, and get out. It's too damned hard to get through Crimsafe. So burglars will give up and move on.

All our screens are made to measure, coloured to match your existing joinery and fitted by our trained staff.

Crimsafe Architectural Series

Crimsafe Security Doors can be custom made to match your architectural door.

Visisafe

Visisafe is a strong 7mm diamond grille system providing an advanced level of security over a standard 7mm aluminum door or screen.

Visisafe's additional security features include:

- Using screws 5 times stronger than ordinary rivets
- Thicker, deeper, stronger frame
- Stronger metal in the grille and frame
- Optional triple locking and triple hinging
- Exceeds Australian standard's for security doors
- Available as fixed, sliding or hinged operation
- Visisafe was designed by Crimsafe using Crimsafe technology.
