INDUSTRIAL

Nano-Clear is the perfect application for your hard-wearing, heavy-duty industrial surfaces. Nano-Clear has been applied to hundreds of steel and powder-coated surfaces on both industrial machinery and vehicles. We've protected various types of industrial vehicles and machinery including tractors, trucks, wheel loaders, cherry pickers, excavators, tractors and dozens more – no vehicle is off limits.

Types of industrial surfaces Nano-Clear is proven to protect:

- Industrial-standard powder coats
- Colour steel
- Stainless steel
- Plastics & vinyl + much more!

ARCHITECTURE

Property is usually our most valuable investment, one which you don't naturally think to protect with a special protective coating. But Nano-Clear's 3D technology can drastically improve surface protection, reducing surface maintenance and improve asset resale value.

Type of architectural materials Nano-Clear can be applied to:

- Concrete and tiled flooring
- Aluminium windows and joinery
- Commercial signage
- Steel walls, cladding and roofing
- Fencing and balustrades
- Garage doors.

TRANSPORT

A lot of time, energy and money can be spent cleaning and maintaining vehicles. They are generally well used assets that face a continual battering from abrasion and corrosion. Nano-Clear dramatically improves surface protection, significantly reducing maintenance time and expenses. Providing a clear coat layer that is six times harder than paint, the usual causes of surface damage – chemicals, UV, corrosion, abrasion – are literally washed away with a hose.

Nano-Clear provides permanent protection for private and commercial vehicles:

- Truck fleets
- Company vehicles
- Private vehicles & classic cars
- Caravans & campervans + much more!

MARINE

Nano-Clear has out-performed all other protective coating products on a range of aspects including UV resistance, salt fog, water immersion, pencil hardness and abrasion resistance. Research shows that every time you clean and polish your boat, you are actually breaking down the existing coating of your vessel – leading to fading, staining and oxidisation.

Benefits of Nano-Clear on your marine asset:

- Rejuvenated colour and weatherproof gloss
- 60% reduction in cleaning and maintenance
- Protection from corrosion and UV damage
- Surface hardness and abrasion resistance.

WHAT DOES NANO-CLEAR ACHIEVE?

- ✓ Restores highly oxidised paints and colours
- ✓ Unmatched topcoat durability
- ✓ Extends freshly painted or existing paint by 100 years
- ✓ Resists against extreme corrosion and abrasion
- ✓ Weatherproof gloss
- ✓ Reduces re-paint cycle by up to 3x
- ✓ Improves brand appearance
- ✓ Lower operating costs.
